

## Overview:

Please create a NodeJs APIs with your preferred NodeJs framework to build a api layer that provides below services -

- User Authentication including Login, Registration and Logout (Using your preferred library)
- Create a crud API for ToDos list that includes -
  - List all todos
  - Create todo
  - Update todo
  - Delete todo
  - Mark todo done
- These endpoints should be protected and accessible only to API authenticated users. Fields to include for todos are given below -
  - ToDo Title
  - Description
  - Image Thumbnail
  - ToDo created by user
  - ToDo created on
  - Is ToDo Completed
- Please describe each API endpoint in readme.md mentioning request parameters.
- For development, use IDE, browser or device of your choice.

## Post Development Requirements:

- Use GIT for version control. And add your project to github as a public repository.
- Please include a README.md file with helpful setup information.
- Added Advantage - Please make your project available live for our access on any of these -
  - Cloud server
  - Github pages
  - Heroku
  - Ngrok
  - Other of your choice
